Prevention of Catheter Associated Urinary Tract Infections

Prevention of Catheter Associated Urinary Tract Infections (CAUTIs) is one of the highest concerns whenever a patient is catheterized for long periods of time. In fact, the longer the period of catheterization, the higher the incidence rate of UTIs. According to the US Centers for Disease Control (CDC), UTIs account for over 30% of infections reported by acute care hospitals.¹ Virtually all of these are caused by introduction of catheters or other instruments into the urinary tract.

The use of a closed system with a sterile fluid path, such as Amsino's AMSure® Pre-Connected Foley Trays, aids in reducing CAUTIs by following the CDC Guidelines² in helping to eliminate breaks in aseptic technique and disconnections of the catheter from the drainage tube.

The AMSure closed Foley catheter trays are not only preconnected at the catheter-tubing junctions, but also include tamper-evident tape at the junction to aid in revealing if the system has been opened.

Furthermore, evidence points to the use of hydrophilic coated catheters as beneficial to patient in comfort, and helping to reduce trauma and infections.^{3,4} Amsino's AMSure Hydrophilic-Coated Foley catheters utilize a proprietary coating method that offer superior lubricity.

See pages 1 and 3 for closed system AMSure Pre-Connected Foley Trays.

AMSure® Urinary Drainage Bags

AMSure urine drainage bags are available in a variety of different configurations to meet the clinicians' needs to best provide patient safety and comfort while helping to minimize infections. All drainage bags include a sheet clamp for the positioning and securing of the drainage tube. The drainage tube has an ID of 11/32" (0.87 cm) for unrestricted flow and are 4 feet (1.2 M) in length, terminating with a standard terraced catheter fitting for a secure and leak-proof connection. Each bag includes a storage pocket for the emptying tube.

(HCPCS code A4358)

- 2,000 cc capacity graduated in 200 cc increments

AMSure® Self-Catheterization Kits with R))POLISHED™ Eye Catheters

AMSure Self-Catheterization kits with R-Polish eyelets technology allow the patient, even with limited dexterity, to perform incontinence care with confidence. R-Polish technology uses radio frequency to create ultra-smooth eyelets for optimal patient comfort.

The pre-lubricated, closed system with introducer tip helps to reduce potential for infections. The kits contain all the necessary components needed to perform aseptic self-catheterization. **(HCPCS code A4353)**

- Advanced R-Polished eyelets enhance patient comfort during catheter insertion and removal
- Introducer tip reduces the potential for urinary tract infection (UTI)
- Collection bag with built-in thumb holes allows for ease of use
- Sterile, BPA-free, not manufactured with natural rubber latex

Kit includes: Pre-lubricated 16 in. (40.64 cm) long PVC urethral catheter, 1100 mL collection bag with insertion tip and protector cap, (3) Povidone-iodine swab sticks and benzalkonium chloride prep pad, vinyl powder-free gloves, waterproof underpad 13 in. x 18 in.
